#### Environmental Scientists Monitor Natural Systems for Signs of Stress

- Ecosystem services:
- Environmental indicators:.

Indicator	Recent trend	Outlook for future	Overall impact on environmental quality
Biological diversity	Large number of extinctions, extinction rate increasing	Extinctions will continue	Negative
Food production support	Per capita production possibly	Unclear leveling off	May affect the number of people Earth can
Average global surface temperature and CO, concentrations	CO <sub>2</sub> concentrations and temperatures increasing	Probably will continue to increase, at least in the short term	Effects are uncertain and varied, but probably detrimental
Human population	Still increasing, but growth rate slowing	Population leveling off Resource consumption rates are also a factor	Negative
Resource depletion	Many resources are being depleted at rapid rates. But human ingenuity frequently develops "new" resources, and efficiency of resource use is increasing in many cases	Unknown	Increased use of most resources has negative effects

Environmental indicators	
The five global environmental indicators are: .

2. 3.	
<b>5.</b>	

### **Genetic Diversity**

• A measure of the

\_\_\_a population.

• Populations with

than populations with lower genetic diversity.

#### **Species Diversity**

- The number of species in a region or in a particular type of habitat.
- Species:

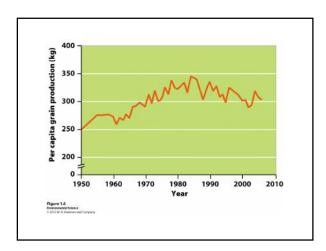

^	
o	

•

## **Environmental Indicator:** Food Production

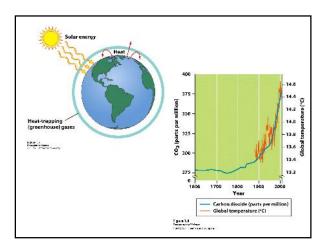

- Our ability to grow food —————
- We use science and agricultural technology \_\_

# **Environmental Indicator: Average Global Surface Temperatures and Carbon Dioxide Concentrations**

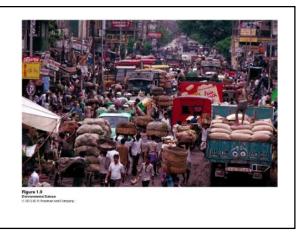

Greenhouse gases:

The most important greenhouse gas is

## Environmental Indicator: Human Population

- The current human population is
- Over one million additional people are added to the Earth every five days.

## **Environmental Indicator: Resource Depletion**

- As the human population grows,
- Some natural resources such as \_\_\_\_\_\_and cannot be renewed or reused.
- Other natural resources like \_\_\_\_\_\_\_ finite amounts but can be recycled.

### **Resource Depletion**

Development:

 At 596
 S896
 Automobiles and trucks

 Development:

 Automobiles Meat and fish
 Total energy Paper

Resource use by people in developed nations

Resource use by people in developing nations

# Controlled Experiments and Natural Experiments

## **Environmental Science Presents Unique Challenges**

- There is no "\_\_\_\_\_" planet with which to compare the Earth. This means there is a lack of "\_\_\_\_\_" data.
- It is often difficult to decide \_\_\_\_\_\_\_\_

## **Environmental Science Presents Unique Challenges**

- Environmental science has so many interacting parts;
- Human well-being is a concern for moral reasons, and because people that are

Environm	nental S	cience
<b>Presents</b>	Unique	<b>Challenges</b>

- Environmental issues are very \_\_\_\_\_ and therefore are poorly understood.
- Many environmental choices are exactly that\_\_\_\_\_

\_\_\_\_
